Operations

ACKNOWLEDGMENTS

Many persons participated in the program of establishing census county divisions in the States in which they were used in the 1959 and 1960 Censuses. The work was initiated under the direction of Clarence E. Batschelet, Chief of the Geography Division until September 1957, with the valuable support of Ray Hurley, Chief of the Agriculture Division, and carried on by William T. Fay, Chief of the Geography Division since then. General supervision of the program and its research aspects was given by Robert C. Klove. Vincent M. Throop, then Chief of the Statistical Areas Branch of the Geography Division, was responsible for the field work necessary to establish specific census county division boundaries. Other Geography Division personnel contributed much in carrying out the field work and processing the maps and boundary descriptions. Outside the Bureau of the Census, cooperation essential to the completion of the program was given by the Governors of the States involved and their staffs, State agencies including the State agricultural extension services, and by county officials, county agricultural agents and others.

CENSUS COUNTY DIVISION BOUNDARY DESCRIPTIONS

INTRODUCTION

What Census County Divisions Are.--For purposes of presenting census statistics, counties in 18 States have been subdivided into statistical areas which are called "census county divisions". These divisions are used instead of the election precincts, townships, or other minor civil divisions for which population statistics were previously reported. These latter areas were deficient for census purposes because their boundaries changed frequently or were not precisely defined. Where the boundaries changed frequently, comparison of the data from one census to another was impeded and, therefore, the statistics for the areas were of limited value. Enumerators had difficulty in locating boundaries where the boundaries were indefinite or did not follow physical features, or where the areas had lost significance.

Census county divisions (CCD's) were established in the State of Washington for use in the 1950 Census. Between 1950 and 1960 they were established in 10 additional States in the West--Arizona, California, Colorado, Hawaii, Idaho, Montana, New Mexico, Oregon, Utah, and Wyoming--and 7 in the South--Alabama, Florida, Georgia, Kentucky, South Carolina, Tennessee, and Texas.

CCD Boundaries and Names.--The CCD's were defined with boundaries that seldom require change and that can be easily located. The boundaries normally follow physical features, such as roads, highways, trails, railroads, power lines, streams, and ridges. The use of survey lines was limited. The larger incorporated places are recognized as separate divisions, and the boundaries of these divisions change when annexations occur. Cities with 10,000 inhabitants or more generally are separate divisions, although some incorporated places with as few as 2,500 inhabitants may be separate divisions. Where an unincorporated enclave exists within a city, it is included in the same CCD as the city.

In the areas with census tracts, each CCD is usually a census tract or group of tracts, or the combination of two CCD's represents one census tract.

Each CCD has a name which is ordinarily the name of the principal place located within it, except in the State of Washington where most CCD's were assigned numbers rather than names.

In the State of Washington, some revisions in the CCD's established in 1950 were made in the metropolitan counties in order to coordinate the divisions with the expanded system of census tracts. Additional changes were made in other counties in places where minor streams and roads used as boundaries in 1950 were not shown on the revised county highway maps used for the 1960 Census. These minor changes had little effect on the comparability of 1950 and 1960 data.

Establishment of CCD's.--In establishing CCD's, consideration was given to recognizing the trade or service areas of principal settlements and in some cases to major land use or physiographic differences. The establishment of CCD's in each State was approved by the Governor or his representative, and the boundaries of individual divisions were reviewed in detail with officials and interested organizations in each county.

The reasons for publishing census county division boundary descriptions are threefold:

- (1) To specify exact areas to which census data apply,
- (2) To facilitate collection or allocation of locally developed data for these areas, and

- (3) To furnish a system of meaningful areas for administrative or other purposes.

Presentation of CCD Boundary Descriptions.--The format selected for publishing the boundary descriptions uses previously typed records of the boundaries. Four typed sheets are arranged in two columns on each page. The order of the descriptions is alphabetical by county.

In the heading of each sheet there appears the county name, the words "Name and Boundary Description," and the sheet number and total number of sheets for the county. Immediately below the name of each division there are listed the names of the incorporated and unincorporated places within the division.

The description of the boundaries starts with the northwesterly corner of the area and proceeds in clockwise fashion denoting the northern, eastern, southern, and western boundaries, respectively. If a division is roughly triangular, three boundaries only are listed.

Census Data For CCD's.--Population totals for each county, census county division, and place are listed in the 1960 Census of Population State report series (PC)1-A. There is a report for each State and a U. S. Summary. There is also a combined single volume for all States, U. S. Census of Population: 1960--Volume I. Characteristics of the Population. Part A. Number of Inhabitants. Comparable 1950 and 1960 figures for CCD's are published in the State of Washington report, but are not available for the 17 other CCD States.

Some characteristics of the population for CCD's are published in the 1960 Census of Population State report series (PC)1-B. These include population by age, sex and race, number of households, and marital status. These data will also be published in a separately bound part for each State entitled U. S. Census of Population: 1960--Characteristics of the Population, Parts 1-57.

Unpublished additional tabulations from the 1960 Censuses of Population and Housing are available at cost. For the contents and costs of these tables write to the Population Division, or the Housing Division, Bureau of the Census, Washington 25, D. C.

From the 1959 Census of Agriculture, data by CCD's can be obtained by paying the cost of preparing the statistical tables, checking the data, and making photoprint copies of the tables. For the contents and costs of these tables write to the Agriculture Division, Bureau of the Census, Washington 25, D. C.

CCD Maps.--Each series (PC)1-A report of the 1960 Census of Population for the CCD States includes a State map in two or more sheets showing the name and outline of each county and CCD and the name and location of each place, but without boundary names. Separate, larger scale, single-sheet maps showing identical information are available for 35 cents each from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. The (PC)1-A and (PC)1-B reports, for all States, mentioned above, and the Volume I, Part A, are available from the same source.

Copies of large scale maps for each county with CCD boundaries shown in detail may be purchased at cost from the Bureau of the Census. Inquiries as to costs for the individual county maps should be directed to Geography Division, Bureau of the Census, Washington 25, D. C.

Operations

ACKNOWLEDGMENTS

Many persons participated in the program of establishing census county divisions in the States in which they were used in the 1959 and 1960 Censuses. The work was initiated under the direction of Clarence E. Batschelet, Chief of the Geography Division until September 1957, with the valuable support of Ray Hurley, Chief of the Agriculture Division, and carried on by William T. Fay, Chief of the Geography Division since then. General supervision of the program and its research aspects was given by Robert C. Klove. Vincent M. Throop, then Chief of the Statistical Areas Branch of the Geography Division, was responsible for the field work necessary to establish specific census county division boundaries. Other Geography Division personnel contributed much in carrying out the field work and processing the maps and boundary descriptions. Outside the Bureau of the Census, cooperation essential to the completion of the program was given by the Governors of the States involved and their staffs, State agencies including the State agricultural extension services, and by county officials, county agricultural agents and others.

CENSUS COUNTY DIVISION BOUNDARY DESCRIPTIONS

INTRODUCTION

What Census County Divisions Are.--For purposes of presenting census statistics, counties in 18 States have been subdivided into statistical areas which are called "census county divisions". These divisions are used instead of the election precincts, townships, or other minor civil divisions for which population statistics were previously reported. These latter areas were deficient for census purposes because their boundaries changed frequently or were not precisely defined. Where the boundaries changed frequently, comparison of the data from one census to another was impeded and, therefore, the statistics for the areas were of limited value. Enumerators had difficulty in locating boundaries where the boundaries were indefinite or did not follow physical features, or where the areas had lost significance.

Census county divisions (CCD's) were established in the State of Washington for use in the 1950 Census. Between 1950 and 1960 they were established in 10 additional States in the West--Arizona, California, Colorado, Hawaii, Idaho, Montana, New Mexico, Oregon, Utah, and Wyoming--and 7 in the South--Alabama, Florida, Georgia, Kentucky, South Carolina, Tennessee, and Texas.

CCD Boundaries and Names.--The CCD's were defined with boundaries that seldom require change and that can be easily located. The boundaries normally follow physical features, such as roads, highways, trails, railroads, power lines, streams, and ridges. The use of survey lines was limited. The larger incorporated places are recognized as separate divisions, and the boundaries of these divisions change when annexations occur. Cities with 10,000 inhabitants or more generally are separate divisions, although some incorporated places with as few as 2,500 inhabitants may be separate divisions. Where an unincorporated enclave exists within a city, it is included in the same CCD as the city.

In the areas with census tracts, each CCD is usually a census tract or group of tracts, or the combination of two CCD's represents one census tract.

Each CCD has a name which is ordinarily the name of the principal place located within it, except in the State of Washington where most CCD's were assigned numbers rather than names.

In the State of Washington, some revisions in the CCD's established in 1950 were made in the metropolitan counties in order to coordinate the divisions with the expanded system of census tracts. Additional changes were made in other counties in places where minor streams and roads used as boundaries in 1950 were not shown on the revised county highway maps used for the 1960 Census. These minor changes had little effect on the comparability of 1950 and 1960 data.

Establishment of CCD's.--In establishing CCD's, consideration was given to recognizing the trade or service areas of principal settlements and in some cases to major land use or physiographic differences. The establishment of CCD's in each State was approved by the Governor or his representative, and the boundaries of individual divisions were reviewed in detail with officials and interested organizations in each county.

The reasons for publishing census county division boundary descriptions are threefold:

- (1) To specify exact areas to which census data apply,
- (2) To facilitate collection or allocation of locally developed data for these areas, and

- (3) To furnish a system of meaningful areas for administrative or other purposes.

Presentation of CCD Boundary Descriptions.--The format selected for publishing the boundary descriptions uses previously typed records of the boundaries. Four typed sheets are arranged in two columns on each page. The order of the descriptions is alphabetical by county.

In the heading of each sheet there appears the county name, the words "Name and Boundary Description," and the sheet number and total number of sheets for the county. Immediately below the name of each division there are listed the names of the incorporated and unincorporated places within the division.

The description of the boundaries starts with the northwesterly corner of the area and proceeds in clockwise fashion denoting the northern, eastern, southern, and western boundaries, respectively. If a division is roughly triangular, three boundaries only are listed.

Census Data For CCD's.--Population totals for each county, census county division, and place are listed in the 1960 Census of Population State report series (PC)1-A. There is a report for each State and a U. S. Summary. There is also a combined single volume for all States, U. S. Census of Population: 1960--Volume I. Characteristics of the Population. Part A. Number of Inhabitants. Comparable 1950 and 1960 figures for CCD's are published in the State of Washington report, but are not available for the 17 other CCD States.

Some characteristics of the population for CCD's are published in the 1960 Census of Population State report series PC(1)-B. These include population by age, sex and race, number of households, and marital status. These data will also be published in a separately bound part for each State entitled U.S. Census of Population: 1960--Characteristics of the Population, Parts 1-37.

Unpublished additional tabulations from the 1960 Censuses of Population and Housing are available at cost. For the contents and costs of these tables write to the Population Division, or the Housing Division, Bureau of the Census, Washington 25, D. C.

From the 1959 Census of Agriculture, data by CCD's can be obtained by paying the cost of preparing the statistical tables, checking the data, and making photoprint copies of the tables. For the contents and costs of these tables write to the Agriculture Division, Bureau of the Census, Washington 25, D. C.

CCD Maps.--Each series PC(1)-A report of the 1960 Census of Population for the CCD States includes a State map in two or more sheets showing the name and outline of each county and CCD and the name and location of each place, but without boundary names. Separate, larger scale, single-sheet maps showing identical information are available for 35 cents each from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. The PC(1)-A and PC(1)-B reports, for all States, mentioned above, and the Volume I, Part A, are available from the same source.

Copies of large scale maps for each county with CCD boundaries shown in detail may be purchased at cost from the Bureau of the Census. Inquiries as to costs for the individual county maps should be directed to Geography Division, Bureau of the Census, Washington 25, D. C.

ACKNOWLEDGMENTS

Many persons participated in the program of establishing census county divisions in the States in which they were used in the 1959 and 1960 Censuses. The work was initiated under the direction of Clarence E. Batschelet, Chief of the Geography Division until September 1957, with the valuable support of Ray Hurley, Chief of the Agriculture Division, and carried on by William T. Fay, Chief of the Geography Division since then. General supervision of the program and its research aspects was given by Robert C. Klove. Vincent M. Throop, then Chief of the Statistical Areas Branch of the Geography Division, was responsible for the field work necessary to establish specific census county division boundaries. Other Geography Division personnel contributed much in carrying out the field work and processing the maps and boundary descriptions. Outside the Bureau of the Census, cooperation essential to the completion of the program was given by the Governors of the States involved and their staffs, State agencies including the State agricultural extension services, and by county officials, county agricultural agents and others.

CENSUS COUNTY DIVISION BOUNDARY DESCRIPTIONS

INTRODUCTION

What Census County Divisions Are.--For purposes of presenting census statistics, counties in 18 States have been subdivided into statistical areas which are called "census county divisions". These divisions are used instead of the election precincts, townships, or other minor civil divisions for which population statistics were previously reported. These latter areas were deficient for census purposes because their boundaries changed frequently or were not precisely defined. Where the boundaries changed frequently, comparison of the data from one census to another was impeded and, therefore, the statistics for the areas were of limited value. Enumerators had difficulty in locating boundaries where the boundaries were indefinite or did not follow physical features, or where the areas had lost significance.

Census county divisions (CCD's) were established in the State of Washington for use in the 1950 Census. Between 1950 and 1960 they were established in 10 additional States in the West--Arizona, California, Colorado, Hawaii, Idaho, Montana, New Mexico, Oregon, Utah, and Wyoming--and 7 in the South--Alabama, Florida, Georgia, Kentucky, South Carolina, Tennessee, and Texas.

CCD Boundaries and Names.--The CCD's were defined with boundaries that seldom require change and that can be easily located. The boundaries normally follow physical features, such as roads, highways, trails, railroads, power lines, streams, and ridges. The use of survey lines was limited. The larger incorporated places are recognized as separate divisions, and the boundaries of these divisions change when annexations occur. Cities with 10,000 inhabitants or more generally are separate divisions, although some incorporated places with as few as 2,500 inhabitants may be separate divisions. Where an unincorporated enclave exists within a city, it is included in the same CCD as the city.

In the areas with census tracts, each CCD is usually a census tract or group of tracts, or the combination of two CCD's represents one census tract.

Each CCD has a name which is ordinarily the name of the principal place located within it, except in the State of Washington where most CCD's were assigned numbers rather than names.

In the State of Washington, some revisions in the CCD's established in 1950 were made in the metropolitan counties in order to coordinate the divisions with the expanded system of census tracts. Additional changes were made in other counties in places where minor streams and roads used as boundaries in 1950 were not shown on the revised county highway maps used for the 1960 Census. These minor changes had little effect on the comparability of 1950 and 1960 data.

Establishment of CCD's.--In establishing CCD's, consideration was given to recognizing the trade or service areas of principal settlements and in some cases to major land use or physiographic differences. The establishment of CCD's in each State was approved by the Governor or his representative, and the boundaries of individual divisions were reviewed in detail with officials and interested organizations in each county.

The reasons for publishing census county division boundary descriptions are threefold:

- (1) To specify exact areas to which census data apply,
- (2) To facilitate collection or allocation of locally developed data for these areas, and

- (3) To furnish a system of meaningful areas for administrative or other purposes.

Presentation of CCD Boundary Descriptions.--The format selected for publishing the boundary descriptions uses previously typed records of the boundaries. Four typed sheets are arranged in two columns on each page. The order of the descriptions is alphabetical by county.

In the heading of each sheet there appears the county name, the words "Name and Boundary Description," and the sheet number and total number of sheets for the county. Immediately below the name of each division there are listed the names of the incorporated and unincorporated places within the division.

The description of the boundaries starts with the northwesterly corner of the area and proceeds in clockwise fashion denoting the northern, eastern, southern, and western boundaries, respectively. If a division is roughly triangular, three boundaries only are listed.

Census Data For CCD's.--Population totals for each county, census county division, and place are listed in the 1960 Census of Population State report series (PC)1-A. There is a report for each State and a U. S. Summary. There is also a combined single volume for all States, U. S. Census of Population: 1960--Volume I, Characteristics of the Population, Part A, Number of Inhabitants. Comparable 1950 and 1960 figures for CCD's are published in the State of Washington report, but are not available for the 17 other CCD States.

Some characteristics of the population for CCD's are published in the 1960 Census of Population State report series (PC)1-B. These include population by age, sex and race, number of households, and marital status. These data will also be published in a separately bound part for each State entitled U. S. Census of Population: 1960--Characteristics of the Population, Parts 1-57.

Unpublished additional tabulations from the 1960 Censuses of Population and Housing are available at cost. For the contents and costs of these tables write to the Population Division, or the Housing Division, Bureau of the Census, Washington 25, D. C.

From the 1959 Census of Agriculture, data by CCD's can be obtained by paying the cost of preparing the statistical tables, checking the data, and making photoprint copies of the tables. For the contents and costs of these tables write to the Agriculture Division, Bureau of the Census, Washington 25, D. C.

CCD Maps.--Each series (PC)1-A report of the 1960 Census of Population for the CCD States includes a State map in two or more sheets showing the name and outline of each county and CCD and the name and location of each place, but without boundary names. Separate, larger scale, single-sheet maps showing identical information are available for 35 cents each from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. The (PC)1-A and (PC)1-B reports, for all States, mentioned above, and the Volume I, Part A, are available from the same source.

Copies of large scale maps for each county with CCD boundaries shown in detail may be purchased at cost from the Bureau of the Census. Inquiries as to costs for the individual county maps should be directed to Geography Division, Bureau of the Census, Washington 25, D. C.

ACKNOWLEDGMENTS

Many persons participated in the program of establishing census county divisions in the States in which they were used in the 1959 and 1960 Censuses. The work was initiated under the direction of Clarence E. Batschelet, Chief of the Geography Division until September 1957, with the valuable support of Ray Hurley, Chief of the Agriculture Division, and carried on by William T. Fay, Chief of the Geography Division since then. General supervision of the program and its research aspects was given by Robert C. Klove. Vincent M. Throop, then Chief of the Statistical Areas Branch of the Geography Division, was responsible for the field work necessary to establish specific census county division boundaries. Other Geography Division personnel contributed much in carrying out the field work and processing the maps and boundary descriptions. Outside the Bureau of the Census, cooperation essential to the completion of the program was given by the Governors of the States involved and their staffs, State agencies including the State agricultural extension services, and by county officials, county agricultural agents and others.

CENSUS COUNTY DIVISION BOUNDARY DESCRIPTIONS

INTRODUCTION

What Census County Divisions Are.--For purposes of presenting census statistics, counties in 18 States have been subdivided into statistical areas which are called "census county divisions". These divisions are used instead of the election precincts, townships, or other minor civil divisions for which population statistics were previously reported. These latter areas were deficient for census purposes because their boundaries changed frequently or were not precisely defined. Where the boundaries changed frequently, comparison of the data from one census to another was impeded and, therefore, the statistics for the areas were of limited value. Enumerators had difficulty in locating boundaries where the boundaries were indefinite or did not follow physical features, or where the areas had lost significance.

Census county divisions (CCD's) were established in the State of Washington for use in the 1950 Census. Between 1950 and 1960 they were established in 10 additional States in the West--Arizona, California, Colorado, Hawaii, Idaho, Montana, New Mexico, Oregon, Utah, and Wyoming--and 7 in the South--Alabama, Florida, Georgia, Kentucky, South Carolina, Tennessee, and Texas.

CCD Boundaries and Names.--The CCD's were defined with boundaries that seldom require change and that can be easily located. The boundaries normally follow physical features, such as roads, highways, trails, railroads, power lines, streams, and ridges. The use of survey lines was limited. The larger incorporated places are recognized as separate divisions, and the boundaries of these divisions change when annexations occur. Cities with 10,000 inhabitants or more generally are separate divisions, although some incorporated places with as few as 2,500 inhabitants may be separate divisions. Where an unincorporated enclave exists within a city, it is included in the same CCD as the city.

In the areas with census tracts, each CCD is usually a census tract or group of tracts, or the combination of two CCD's represents one census tract.

Each CCD has a name which is ordinarily the name of the principal place located within it, except in the State of Washington where most CCD's were assigned numbers rather than names.

In the State of Washington, some revisions in the CCD's established in 1950 were made in the metropolitan counties in order to coordinate the divisions with the expanded system of census tracts. Additional changes were made in other counties in places where minor streams and roads used as boundaries in 1950 were not shown on the revised county highway maps used for the 1960 Census. These minor changes had little effect on the comparability of 1950 and 1960 data.

Establishment of CCD's.--In establishing CCD's, consideration was given to recognizing the trade or service areas of principal settlements and in some cases to major land use or physiographic differences. The establishment of CCD's in each State was approved by the Governor or his representative, and the boundaries of individual divisions were reviewed in detail with officials and interested organizations in each county.

The reasons for publishing census county division boundary descriptions are threefold:

- (1) To specify exact areas to which census data apply,
- (2) To facilitate collection or allocation of locally developed data for these areas, and

- (3) To furnish a system of meaningful areas for administrative or other purposes.

Presentation of CCD Boundary Descriptions.--The format selected for publishing the boundary descriptions uses previously typed records of the boundaries. Four typed sheets are arranged in two columns on each page. The order of the descriptions is alphabetical by county.

In the heading of each sheet there appears the county name, the words "Name and Boundary Description," and the sheet number and total number of sheets for the county. Immediately below the name of each division there are listed the names of the incorporated and unincorporated places within the division.

The description of the boundaries starts with the northwesterly corner of the area and proceeds in clockwise fashion denoting the northern, eastern, southern, and western boundaries, respectively. If a division is roughly triangular, three boundaries only are listed.

Census Data For CCD's.--Population totals for each county, census county division, and place are listed in the 1960 Census of Population State report series (PC)1-A. There is a report for each State and a U. S. Summary. There is also a combined single volume for all States, U. S. Census of Population: 1960--Volume I, Characteristics of the Population, Part A, Number of Inhabitants. Comparable 1950 and 1960 figures for CCD's are published in the State of Washington report, but are not available for the 17 other CCD States.

Some characteristics of the population for CCD's are published in the 1960 Census of Population State report series (PC)1-B. These include population by age, sex and race, number of households, and marital status. These data will also be published in a separately bound part for each State entitled U. S. Census of Population: 1960--Characteristics of the Population, Parts 1-57.

Unpublished additional tabulations from the 1960 Censuses of Population and Housing are available at cost. For the contents and costs of these tables write to the Population Division, or the Housing Division, Bureau of the Census, Washington 25, D. C.

From the 1959 Census of Agriculture, data by CCD's can be obtained by paying the cost of preparing the statistical tables, checking the data, and making photoprint copies of the tables. For the contents and costs of these tables write to the Agriculture Division, Bureau of the Census, Washington 25, D. C.

CCD Maps.--Each series (PC)1-A report of the 1960 Census of Population for the CCD States includes a State map in two or more sheets showing the name and outline of each county and CCD and the name and location of each place, but without boundary names. Separate, larger scale, single-sheet maps showing identical information are available for 35 cents each from the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C. The (PC)1-A and (PC)1-B reports, for all States, mentioned above, and the Volume I, Part A, are available from the same source.

Copies of large scale maps for each county with CCD boundaries shown in detail may be purchased at cost from the Bureau of the Census. Inquiries as to costs for the individual county maps should be directed to Geography Division, Bureau of the Census, Washington 25, D. C.
